DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1, 2 and 4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kim ('291) in view of Shimp et al ('871). The primary reference discloses a composition for coating the cut edges of wood panels comprising a butylacrylate latex, a wax, an oil and a surfactant; see column 3, lines 3-8, 28-29 and 51, column 4, lines 11-26, column 5, line 9 and column 6, line 38. The primary reference fails to disclose the claimed type of surfactant and coating four edges of a panel. The secondary reference discloses the use of organic acid salts as surfactants in aqueous coating compositions; see column 3, lines 48-56. It would have been obvious to one of ordinary skill in the art to use any well-known surfactant, such as an organic acid salt, as the surfactant in the article of the primary reference in view of the teachings in the secondary reference in order to provide optimum coatings properties to the composition. While the primary reference does not specifically disclose coating four edges of a panel it does disclose coating cut edges of boards. It would have been obvious to one of ordinary skill in the art to coat four edges of a board with the composition disclosed in the primary reference if the wood based panel has four cut edges in order to protect all cut edges.

Concerning claim 2, it would have been obvious to one of ordinary skill in the art to

apply the composition at the specific spread rate claimed in order to provide optimum seal properties for a particular end use absent a showing of unexpected results attributable to the specific spread rate.

Allowable Subject Matter

3. Claim 3 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
